#### ABSTRACT

The eighth module in a 17-module self-instructional program on student financial aid administration (designed for novice student financial aid administrators and other personnel) focuses on need analysis. It provides an introduction to the management of federal financial aid programs authorized by the Higher Education Act Title IV. After completing the module, the user will be able to describe the historical development of need analysis and the origin of the Pell Grant and Congressional Methodology (CM) approaches, identify the similarities and differences between these two approaches, and describe the categories for independent students and dependent students. Information on need analysis includes the following: definition, principles, and history of need analysis; current need analysis procedures; dependency status; the formulas and their components; and recalculation and adjustment of the EFC by the financial aid administrator. A pre-test, post-test, glossary, and acronyms are included. The following appendixes are included: (1) case studies: need analysis using the Pell Grant and CM methodology formulas; (2) sample need analysis output documents (Student Aid Report, FAFNAR, and Family Financial Statement confirmation report/CFAR); (3) dependency override; (4) recalculating the Family Contribution for periods of enrollment other than 9 months; and (5) veterans educational benefits: treatment as a resource and estimated financial assistance. Tables are included. Contains five references. (SM)

This publication is one component of A Self-Instructional Course in Student Financial Aid Administration. This Second Edition of the course consists of the following modules:

- 1. Student Financial Aid Administration. Course Study Guide and Introduction to the Field
- 2. Federal Student Financial Aid: History and Current Sources
- 3. The Legislative and Regulatory Processes
- 4. Roles and Responsibilities of the Financial Aid Office
- 5. Title IV Institutional and Program Eligibility
- 6. General Student Eligibility
- 7. Calculating Cost of Attendance
- 3. Need Analysis
- 9. Award Packaging
- 10. The Pell Grant Program
- 11. The Stafford Loan, SLS, and PLUS Programs
- 12. Campus-Based Programs: SEOG, CWS, and Perkins Loan
- 13. Verification
- 14. Authorization, Fiscal Operations, and Reporting
- 15. Internal Aid Office Management and Institutional Quality Control
- 16. Forms and Publications
- 17. Evaluation of Student Aid Management. Self-Evaluation, Audit, and Program Review

The course includes a Support Booklet with the complete course glossary, acronyms, key resources, bibliography, and index, as well as addresses of publishers mentioned in the course. The Support Booklet also offers guidelines for further study.

## UNITED STATES DEPARTMENT OF EDUCATION

WASHINGTON, D.C. 20202

October 1988

Dear Colleague:

We are pleased to present the Second Edition of A Self-Instructional Course in Student Financial Aid Administration. This updated version of the course originally published in 1986 incorporates provisions of the Higher Education Amendments of 1986, with 1987 Technical Amendments and subsequent amendments.

The purpose of the course remains the same. It is designed to provide neophyte financial aid administrators (those with two years or less experience in student aid) and other institutional personnel with a systematic introduction to management of federal financial aid programs authorized by Title IV of the Higher Education Act. Students of the course will gain a fundamental understanding of the roles and responsibilities : participating institutions and of student aid administrators. On completion of the course, they will be prepared to expand this knowledge with the use of training and reference materials, on-site training opportunities, and contacts with other members of the profession.

The materials were revised under a contract with the Washington Consulting Group. The text was reviewed for technical accuracy by many staff members of the Office of Student Financial Assistance (OSFA). Special acknowledgement is due to both project staff and OSFA specialists for accomplishing very wide-ranging modifications of the text during a period when much legislative and regulatory activity affecting student aid was in progress.

Your comments and suggestions regarding any aspect of the materials are OSFA is particularly interested in learning 1) the level of experience and job responsibilities of personnel at your institution using the modules; 2) the purposes for which they are being used (for example, self-study, training new staff, reference); and 3) whether you feel that this publication is among those that OSFA should continue to update and disseminate annually. You may send your comments to the Training Branch, OSFA/ED, 400 Maryland Avenue S.W., Washington, D.C. 20202.

Sincerely,

Deputy Assistant Secretary for

Student Financial Assistance

Director, Student Financial

Assistance Programs

Enclosure

The following non-OSFA participants contributed to the development of this Second Edition of the course:

David Wyatt, Project Director Washington Consulting Group Washington, D.C.

Suzanne Thompson, Financial Aid Specialist Washington Consulting Group Washington, D.C.

Sarah Pratt Nesbitt, Financial Aid Specialist Washington Consulting Group Washington, D.C.

> Carl Emerick Montgomery College Rockville, MD

Vicki Baker George Washington University Washington, D.C.

Mary Kahn, Corporate Officer in Charge Washington Consulting Group Washington, D.C.

# MODULE 8 NEED ANALYSIS

The technical information in this module is based on laws, regulations, policies, and procedures in effect as of:

August 20, 1988

This is one component of A Self-Instructional Course in Student Financial Aid Administration. This Second Edition of the course has been prepared by The Washington Consulting Group, Inc., under a contract with the U.S. Department of Education.

The course consists of 17 modules and a support booklet. It provides an introduction and guide to the administration of student financial aid programs authorized under Title IV of the Higher Education Act of 1065, as amended. The titles of the modules are listed on the inside front cover of this publication.

Institutions may freely reproduce the course for their own use. For more information on the course, contact one of the Department of Education offices listed on the inside back cover of this publication.

#### MODULE 8

#### **NEED ANALYSIS**

# ☐ LEARNING OBJECTIVES

After completing this module, you will recognize the central position of need analysis in the financial aid delivery system. Specifically, you will be able to:

- describe the historical development of need analysis and the origin of the Pell Grant and Congressional Methodology (CM) approaches to need analysis;
- ♦ identify the similarities and differences between the Congressional Methodology and Pell Grant need analysis methods and formulas;
- ♦ define the categories dependent student and independent student, and describe how to compute an expected family contribution for both types of students;
- list the current Multiple Data Entry (MDE) processors and describe the features of multiple data entry; and
- describe the ways the financial aid administrator interacts with the ED central processor, the MDE processors, and other certified need analysis system processors.

#### □ INTRODUCTION

In this module some important threads introduced in our earlier discussions are tied together. Three underlying principles of the federal government's support for student aid programsnamely, the primary responsibility of students and parents in funding educational costs, the determination of financial need, and equitable treatment of families financial strength--find practical application here. These general principles have been translated into a uniform approach that assesses a family's ability to pay for postsecondary education. This method is called need analysis.

During the history of the financial aid programs, there have been several different methods of need analysis. However, there are now only two methods for the Title IV programs, both specified by law-the Pell Grant formula and the Congressional Methodology (ČM). While there are differences in how these methods assess a family's financial situation, both result in an expected family contribution.

Our discussion of need analysis systems should remind you of the basic calculation we introduced in Module 7:

Cost of Attendance - Expected Family Contribution = Financial Need

8/20/88

In Module 7, we examined the first half of this equation—calculating educational costs. Now we focus on the second half of the problem—calculating the expected family contribution.

An expected family contribution, or EFC, is the end product of both need analysis methods. The EFC is a measurement of the amount a family can be expected to contribute toward the cost of attendance at any institution, based on the family's income and assets. Understanding the two need analysis formulas--along with the history of their development and underlying economic principles—is an essential step in understanding the basic concepts of financial aid.

#### PRE-TEST

- 1. For independent students, the Pell Grant formula generally uses base-year income data, while the Congressional Methodology uses income data projected for the academic year. True or False?
- 2. Dependency status refers to: (circle the correct answer)
  - a. whether the student has dependents of his or her own
  - b. the student's dependence upon financial assistance to attend a given institution
  - c the student's relationship to a parent—residence with a parent, tax exemption status, and receipt of financial assistance from the parent
- 3. Students with family adjusted gross incomes of more than \$25,000 in the base year preceding the award year are ineligible to borrow under the Stafford Loan program. True or False?
- 4. Circumstances not considered in the Pell Grant and Congressional Methodology need analysis formulas are: (circle any that apply)
  - a. an institutional scholarship already awarded to the student
  - b. consumer debts of the family
  - c medical expenses of the family
  - d. home equity
  - e. deductions on an income tax return
- 5. Complete this subtraction problem: Cost of Attendance Expected Family Contribution = ?
  - a. cost of education
  - b. net cost of attendance
  - c available income
  - d. financial need
- 6. Dependency status will determine whose financial information (parents' and student's or student's) and which formula (dependent or independent model) will be used by the central processor to determine an expected family contribution. True or False?

12

- 7. If a student is eligible for a Pell Grant: (circle all that apply)
  - a. eligibility for other aid is unknown until further n ed has been determined
  - b the student will always be eligible for a Stafford Loan
  - c the student will always be eligible for a Stafford Loan; beyond that, we cannot say what the student will be eligible for until further need is determined
  - d. the student will always be eligible for campus-based aid
- 8. Multiple data entry refers to: (circle all that apply)
  - a. multiple submissions of an application form resulting from the need to correct data
  - b. data collection for both the Pell Grant processor and a certified need analysis processor on a single financial aid form
  - c submission of data for two student applicants (members of the same family) on the same application form
- 9. Aid administrators may use either the Pell Grant SAI or the Congressional Methodology FC when determining a student's eligibility for a Stafford Loan, because the two formulas are interchangeable for this purpose. True or False?
- 10. Need analysis for awarding Title IV funds is based on the principle that:
  - a. the institution bears the primary responsibility for paying for the cost of attendance of any student admitted to its program
  - b. the federal government bears the primary responsibility for paying for the cost of attendance of an eligible student admitted to an institution of higher education
  - c parents and students bear the primary responsibility for paying for the cost of attendance at an institution
- 11. The term base year refers to: (circle the correct answer)
  - a. the calendar year preceding the academic year (1987 for the 1988-89 academic year)
  - the current academi: year, or current period of attendance if this will be less than a complete academic year
  - c the calendar year which is 2 years before the student's enrollment (1986 for the 1988-89 academic year)
- 12. The term need analysis: (circle the correct answer)
  - refers to one of the methods specified by law for determining student need for Title IV assistance
  - b refers to an overall determination of need for financial assistance
  - c refers to a mathematical formula used to determine an expected family contribution (EFC)
  - d. may refer to any of the above
- 13. The Pell Grant SAI and the Congressional Methodology FC are both expected family contribution figures. True or False?

8/20/88

#### **ANSWERS**

- 1. False. (8.3.7)\*
- 2. c. (8.5)
- 3. False. (8.3.7, 8.6.1)
- 4. a. and b. (8.6.1 and 8.6.2)
- 5. d. (8.1)
- 6. True. (8.5)
- 7. a. (8.3.7, 8.4)
- 8. b. (8.4)
- 9. False. (8.6.1)
- 10. c. (8.2)
- 11. a. (8.2)
- 12. d. (8.1, 8.4)
- 13. True. (8.6.1, 8.6.2)

#### 8.1 DEFINITION OF NEED ANALYSIS

An important first step in discussing *need analysis* is to point out the different uses of the term that you may encounter. It is also important to identify the formulas that fall under the general heading of need analysis systems.

In its broadest sense, need analysis simply means estimating the amount of student aid a student will require to attend a particular postsecondary institution. The overall determination of financial need through the use of our formula:

COA - EFC = NEED

is a generally recognized use of the term need analysis.

Need Analysis: Another, narrower use of the term *need* analysis is a description of the mathematical calculation used to derive the expected family contribution.

COA - EFC = NEED

This measurement of a family's ability to contribute toward educational costs becomes part of the equation that establishes the financial need figure. Our discussion will be devoted to this narrower usage of the term need analysis.

# **8.2 PRINCIPLES OF NEED ANALYSIS**

The principles of need analysis include the underlying principles of federal student financial aid that we discussed in Module 2, and some additional ones based on economic factors.

Principle #1--To the extent that they are able, parents and students have the primary responsibility to pay for postsecondary education.

COA = Cost of Attendance

EFC = Expected Family Contribution

In this module, the term **need analysis** will generally mean the
measurement of a family's ability to
contribute toward educational costs.

For more information on the history, goals, and major provisions of the Title IV programs, refer to Module 2, Federal Student Financial Aid: History and Current Sources.

ERIC Full text Provided by ERIC

8/20/88

A primary purpose of the financial aid application form is to collect financial data needed to assess the family's financial strength.

- ❖ For an independent student, the form collects information on the student's (and spouse's) income and assets only. Parent income and asset information is generally not required for independent students.
- ❖ For the dependent student, income and asset information is collected from the parents, the student, and the student's spouse, if married. It is assumed that all these family members should contribute to college costs.

Principle #2--A family's financial strength is most accurately reflected in its annual income and assets; financial information must be collected and evaluated in a consistent and equitable manner. The results should be the same for families in similar situations.

Principle #3-Only the current financial situation of the family is considered.

The best predictor of a family's financial situation during the period of study has proven to be data from the most recent calendar year. This is referred to as base-year income information. Since it is actual income, it is not subject to the error that may occur when families estimate their annual income.

Estimated parental and student income information for the next calendar year (expected year income) is collected only for those students, parents of dependent students, and students' spouses who qualify for special treatment. Some students and/or their parents may be eligible for the Dislocated Worker variants of the need analysis formulas. Other families may have extraordinary circumstances that must be taken into consideration.

Principle #4--Income and asset information used to estimate the family's ability to contribute should be verifiable.

Most applicants provide taxable income information from the most recent calendar year-the base-year income.

16

This information is verifiable through tax returns filed with the Internal Revenue Service. If the family had untaxed income and benefits (such as Social Security benefits or Railroad Retirement benefits), the amount received during the preceding 12 months can be verified through the sponsoring agency. Similarly, asset information should be from sources that can be verified by the aid administrator, if necessary.

Principle #5--Any method of need analysis should take into account the characteristics of the household.

Information is collected on household size, marital status, and the number of household members to be enrolled at least half-time in postsecondary education. The need analysis formulas take this information into consideration in calculating the expected family contribution.

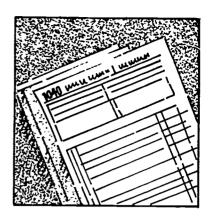

Principle #6- A need analysis method should evaluate a family's ability to pay for postsecondary education after making realistic allowances for living expenses, other discretionary expenses, and protection of family resources for future expenses, such as retirement.

Principle #7--A need analysis method should be sensitive to special circumstances which affect the family's ability to contribute.

These principles are elements of the need analysis formulas we will examine. Allowances against income and assets recognize other expenses that reduce a family's ability to contribute to the cost of education. Changes in any of the major elements (for example, income and assets) of the formula due to changed family circumstances (for example, unusually large medical expenses, loss of employment, or death of a wage earner) may also affect the expected family contribution.

## 8.3 HISTORY OF NEED ANALYSIS

The concept of awarding student aid on the basis of financial need actually predates the development of the major federal aid programs we work with today. Need has always been a concept underlying most scholarship assistance. The definition of financial need was established,

"Allowances" = "offsets"

8/20/88

however, by individual institutions on a case-by-case basis and was generally applied only to tuition costs.

The value of a more systematic method for determining financial need became apparent with the significant increase in the number of people enrolling in higher education after World War II.

# 8.3.1 Development of a Systematic Approach

A small group of colleges developed a consensus that financial need should be determined through a systematic, comparative measurement of family size, income, and assets in relation to educational costs. This consensus led to the founding of the College Board's College Scholarship Service (CSS). During the 1954-55 academic year, CSS began a centralized system of distributing forms for the collection of family financial information.

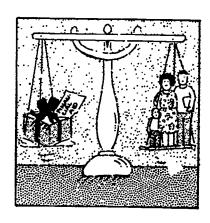

The growth in available federal student aid dollars in the late 1950s hastened the development of a centralized system for evaluating need. By the early 1960s, the nationwide system that exists today was in place. Other service agencies and need analysis systems, such as the American College Testing Program (ACT) and the Graduate and Professional School Financial Aid Service (GAPSFAS), provided similar evaluation and computation services. The growing number of state scholarship and grant programs either developed their own forms and need analysis formulas or used existing service agencies.

# 8.3.3 Development of the Uniform Methodology

By the 1970s, there was concern over variations in the need analysis formulas which resulted in unequal treatment of families' financial resources. The need for a national standard of "ability to pay" was recognized. A National Task Force on Student Financial Aid Problems was formed to develop: (1) a common need analysis formula to calculate an expected family contribution, and (2) a common form to collect family financial data.

The participating organizations examined all of the existing systems. In 1975, one "uniform methodology" of need analysis was introduced. The service agencies used

In the past, different service agencies might use different systems and formulas for need analysis. Today, the law provides for only two methods of need analysis for federal student financial aid:

- the Family Contribution Schedule (FCS), generally called the Pell Grant formula, for use in the Pell Grant program
- the Congressional Methodology (CM) for the campus-based, Stafford Loan, and SLS programs

18

this Uniform Methodology (U.M.) to calculate an expected family contribution (EFC); and institutions used the expected family contribution to determine financial need and award federal campus-based and institutional need-based funds to students.

#### 8.3.4 The Introduction of the Pell Grant Formula

The Pell Grant (formerly BEOG) program, which began in 1972, introduced several new concepts to rinancial aid. The program used a separate method of need analysis. The Pell Grant need analysis formula was designed to ensure consistent treatment of family financial circumstances for all applicants for this new program. The formula treated similar family circumstances in the same way, resulting in the same expected family contribution.

At that time, financial aid administrators were not allowed to make documented adjustments to a student's need analysis for the Pell Grant program as they could in the Uniform Methodology process. Instead, a separate application was developed for reporting changed family circumstances, with the ED central processor performing the recalculation. The Family Contribution Schedules published as part of the Pell Grant formula also resulted in different family contributions, in some cases, than under the U.M. formula. This was because of the Pell Grant formula's more limited allowances, or offsets, against family income and assets.

8.3.5 MDE Processors

By the mid-1970s, students were in many cases required to complete several different forms to apply for various student aid programs—one form for the Pell Grant, another for campus-based aid, and, in some states, a third form for state grants and scholarships. This situation led to an agreement in 1977 between service agencies and the U.S. Office of Education to accept data collected on Uniform Methodology need analysis forms for use in Pell Grant need analysis. The service agency forms were redesigned to collect all the family information needed to calculate eligibility for the Pell Grant program as well as the data needed to calculate an expected family contribution based upon the Uniform Methodology. These processors became known as Multiple Data Entry (MDE) processors.

The Pell Grant program was known as the Basic Educational Opportunity Grant (BEOG) program until passage of the Higher Education Amendments of 1980

19

To simplify the application proces; further, several state agencies began to collect data for state grants and scholarships by using one of the existing need analysis service documents.

#### 8.3.6 The GSL Needs Test

The Omnibus Budget Reconciliation Act of 1981 created a change in the need analysis situation for aid administrators. This legislation required Guaranteed Student Loan applicants with adjusted gross family incomes of more than \$30,000 to show financial need for federally subsidized student loan funds.

A GSL Needs Test was developed for applicants with family incomes between \$30,001 and \$75,000. GSL Family Contribution Schedules published annually in the Federal Register allowed the financial aid administrator to quickly calculate the family's EFC, so that these applicants' need for GSL loans could be determined without requiring them to complete a service agency's financial aid application. The GSL Needs Test is no longer in use.

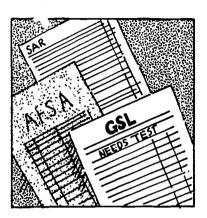

8.3.7 Recent Changes, Including the Higher Education Amendments of 1986

The methods of need analysis have undergone some major changes with the passage of the Higher Education Amendments of 1986, as amended.

- All recipients of a Stafford Loan, regardless of family income, must now demonstrate financial need. A need analysis computation based on the Congressional Methodology must now be used to determine a student's EFC for the Stafford Loan program.
- ♦ The law specifies details of two need analysis methods:
  - the Family Contribution Schedule (FCS), generally called the Pell Grant formula, for use in the Pell Grant program
  - the Congressional Methodology (CM), for use in the campus-based, Stafford Loan, and SLS programs

Both methods use base-year income data in the computation of the EFC.

The former Guaranteed Student Loan (GSL) program is now called the *Stafford Loan* program.

All applicants for an SLS loan must have their eligibility for a Pell Grant and a Stafford Loan determined before an SLS application may be certified. Pub. L. 100-369.

- There are two variants of the Pell Grant and Congressional Methodology formulas:
  - the Regular formulas, including sub-variants for:
    - -- the Dislocated Worker, and
    - -- the Displaced Homemaker
  - the Simplified Needs Test, an option for a student whose family has a total adjusted gross income of \$15,000 or less and who:
    - --either filed an IRS 1040A or 1040EZ
    - --or did not and will not file a tax return
- ❖ The "Special Condition Application," formerly used to obtain a new EFC when certain family financial circumstances changed, is no longer in use. Instead, to allow for special circumstances, the aid administrator now has the authority to adjust the data elements, methodology, or product (end result) of the need analysis. Such adjustments must be directly related to the individual student's special circumstances and must be well documented in the student's file.

#### 8.4 CURRENT NEED ANALYSIS PROCEDURES

Today, there are only two need analysis methods, with two basic formulas:

- the Pell Grant formula, which produces an expected family contribution called the Student Aid Index, or SAI, used in determining the amount of the Pell Grant
- the Congressional Methodology formula, which produces an FC, or (expected) family contribution, used for awarding in the campus-based, Stafford Loan, and SLS programs

There are two alternative application procedures for a student to obtain both an official FC and an official SAI:

- by submitting the Application for Federal Student Aid (AFSA) to the ED central processor; or
- by submitting an MDE application to an MDE processor.

Estimated and Official EFCs (SAIs and FCs)

If a student supplies incomplete data:

- the ED central processor will not calculate an EFC
- some processors (ACT, CSS, PHEAA) may calculate an estimated EFC (SAI and FC)

Estimated EFCs may be used only to estimate students' aid packages-disbursements cannot be made based on estimated EFCs.

The student can convert estimated EFCs (SAIs and FCs) to official EFCs by supplying complete or corrected data to the central processor using Part 2 of the SAR.

ERIC Full Text Provided by ERIC

8/20/88

21

If only an FC is needed, an official FC may be determined by any need analysis system (NAS) certified by ED for the award year.

The Application for Federal Student Aid (AFSA) and the ED Central Processor

The student completes the AFSA and mails it to the Federal Student Aid Application Processing Center (the ED central processor). The ED processor calculates an expected family contribution, the SAI, which is used to determine the amount of the Pell Grant. The ED central processor also calculates an FC based on the Congressional Methodology formula. This can be used in determining need for the campus-based, Stafford Loan, and SLS programs. The official FC and SAI calculatea by the ED central processor will be identical with the FC and SAI calculated by an MDE processor using the same data.

MDE Applications and Processors

Four need analysis processors are under contract with the Department of Education as multiple data entry (MDE) processors:

- ♦ American College Testing Program (ACT)
- ♦ College Scholarship Service (CSS)
- ♦ Illinois State Scholarship Commission (ISSC)
- Pennsylvania Higher Education Assistance Agency (PHEAA)

The MDE system allows a student to use any of the four MDE processors' need analysis forms to apply at the same time for the Pell, campus-based, Stafford Loan, and SLS programs.

An institution generally specifies which need analysis document students should use to apply for the federal programs and for financial aid from the institution. In many states, the same application form is used to apply for state grant and scholarship programs. Students using an MDE processor's need analysis form to apply for the federal aid programs must sign the authorization statement on the form to enable the MDE processor to transfer data needed to determine Pell Grant eligibility to the ED central processor.

AFSA forms are sent to postsecondary institutions and secondary schools before application processing begins each year. ED mails a request form to participating postsecondary and secondary institutions for their use in ordering their initial supply of applications. Need analysis service agencies ship their application forms to postsecondary institutions that have previously used their services. Secondary schools are also provided with supplies of service agencies' forms.

Although MDE processors can produce official SAIs, only the first Pell disbursement can be based on an MDE official SAI. For subsequent disbursements, you must have the SAR with the official SAI.

- MDE application forms require a processing fee. The AFSA application form is processed by the ED central processor at no charge. Institutions and students have the choice of using the AFSA or another need analysis service agency application.
- Processing applications for financial aid begins in the January preceding the award year and continues throughout the award year. The Pell Grant program application deadline is published each year. For the 1988-89 award year, the deadline for receipt of Pell Grant applications is May 1, 1989.

Eight-8 8/20/88

The central processor mails a report of Pell Grant eligibility, called the Student Aid Report (SAR), directly to the student. The student must submit the SAR to the institution's financial aid office in order to receive a Pell Grant.

A student may also receive a need analysis report containing an SAI and FC from an MDE or NAS processor. This report should also be submitted to the financial aid office.

Certified Need Analysis Systems

Only the applicant's FC is needed for campus-based, Stafford Loar, and SLS awarding. Official FCs may be determined by any need analysis system (NAS) certified by ED for the award year. Need analysis servicers (service agencies) whose systems have been certified for 1988-89 were listed in the Federal Register in May 1988. Note that it is the need analysis system rather than the servicer that ED certifies.

There are four levels of NAS certification:

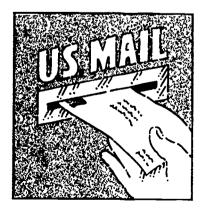

- ♦ Level 1—calculates the FC when the student provides complete application data (no edit checks)
- ♦ Level 2--calculates the FC and selects students for verification
- ♦ Level 3—calculates the FC and edits for incomplete or inconsistent data
- Level 4--calculates the FC, edits for incomplete or inconsistent data, and selects students for verification

# 8.4.1 Application Processing and Application Forms

The basic processing steps for aid applications submitted through the ED central processor and MDE processors are compared in the diagram on the next page. The following six pages then show side one and side two of the most widely used financial aid application forms:

- ♦ ED's Application for Federal Student Aid (AFSA)
- ♦ ACT's Family Financial Statement (FFS)
- ♦ CSS's Financial Aid Form (FAF)

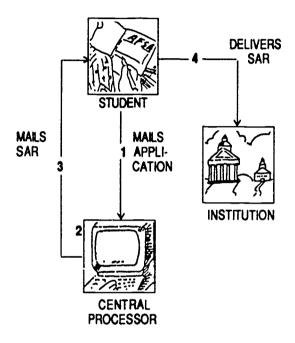

Institutions may also receive need analysis data from processors on computer media, as with the electronic SAR.

8/20/88

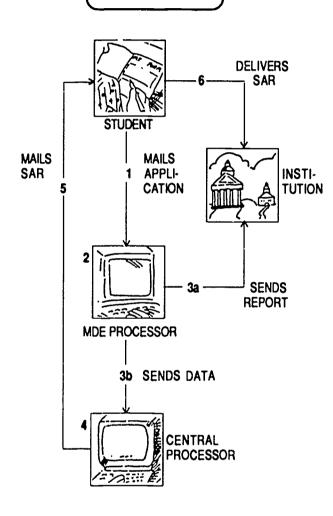

# COMPARISON OF APFLICATION PROCESSING BY THE ED CENTRAL PROCESSOR AND MDE PROCESSORS

# **ED CENTRAL PROCESSOR**

- 1. Student completes and mails the application form to the ED central processor.
- Central processor calculates FC and SAI.
- SAR mailed to the student.
- 4. SAR submitted to the institution by the student.

# MDE PROCESSOR

- Student completes and mails the application form to the MDE processor.
- 2. MDE processor calculates EFC and SAI.
- 3a. MDE processor sends need analysis report to institution(s) designated by the student.
- 3b. MDE processor sends data to the ED central processor.
- 4. Central processor calculates FC and SAI.
- 5. SAR mailed to the student.
- 5. SAR submitted to the institution by the student.

# Application for Federal Student Aid

School Year 1988-89

FORM APPROVED OMB NO 1840-0110 APP ENF 63016

U.S. Department of Education Student Financial Assistance Programs

WARNING: If you purposely give false or misleading information on this form, you may get a \$10,000 fine, a prison sentence, or both.

"You" and "your" on this form always mean the student who wants aid

## Step 1: Student Status

Copy in this step your answers fro			Unmarried Under	Minage Co	iddelits.		
I-1. A. Wars you born before January 1, 1965* B. Are you a veteran of the U.S. Armed For C. Are you a ward of the our for are both y	rces?	<b>%</b> 0000	1-3. Did your parents of		in 1986? in 1987?	Yee	No Lii

# 8.4.2 Important Factors in Need Analysis

One fundamental factor in need analysis is the student's dependency status—whether the student qualifies as dependent or independent under the law. This determines whose income and assets will be taken into consideration in calculating the family contribution.

A second consideration is which variant of the need analysis formulas will be used in calculating the family contribution. Among the regular Pell Grant and CM formulas, there are variations which take into account the special circumstances of displaced homemakers and dislocated workers. There is also a simplified formula for low-income families.

These two important factors are discussed in the next two sections.

# **8.5 DEPENDENCY STATUS**

The first step in any need analysis method is to determine the student's dependency status. Dependency refers to financial dependence upon parents, and independent status is defined by law for purposes of federal Title IV financial aid. Classifying a student as dependent or independent allows you to determine whose financial information will be included in the calculation of the expected family contribution—the student's, or the student's and parents'. (If the student is married, the spouse's financial information will be included in both cases.)

For the Title IV aid programs, an independent student is one who has demonstrated self-sufficiency based on the statutory definition of an independent student. The law requires that a student meet at least *one* of the following criteria to be considered an independent student:

- an individual who is at least 24 years old by December 31 of the award year for which aid is sought; or
- 2 a ward of the court, or with both parents dead; or
- 3. a veteran of active duty in the U.S. Armed Forces; or

ERIC

8/20/88

- an individual with legal dependents other than a spouse (for example, dependent children or an elderly dependent parent); or
- 5. a graduate or professional student who will not be claimed as an income tax exemption by his or her parents or guardian for the first calendar year of the award year (for example, calendar year 1988 for award year 1988-89); or
- a married individual who will not be claimed as an income tax exemption by his or her parents or guardian for the first calendar year of the award year; or
- 7. a single undergraduate student with no dependents who was not claimed as a dependent by his or her parents or guardian for the two calendar years preceding the award year,\* and who demonstrates total self-sufficiency for those two years as evidenced by an annual total income (taxed and untaxed) of at least \$4,000 in each of those years.

Students qualifying as independent students under points 5, 6, or 7 above must *document* that they satisfy the requirements of that criterion before any Title IV funds can be disbursed.

→ Dependency Override: Students may not be considered as independent students under the criteria in points 5, 6, and 7, even if they were considered independent during the preceding award year, if they were claimed as income tax exemptions by anyone other than their spouses for the first calendar year of that award year. In these cases, the aid administrator must use the dependency override procedure to change the student's status from independent to dependent.

On the basis of unusual circumstances, the aid administrator may also use the dependency override procedure to change a student's status from dependent to independent. The aid administrator must use professional judgment and thoroughly document the circumstances upon which the decision was made. Such dependency override decisions must be made strictly on a case-by-case basis.

Many students approaching your office and the financial aid application process for the first time consider themselves independent if they have reached a generally recognized age of majority (18 or 21). Some make a

\*For students who receive financial aid for the first time in the 1988-89 award year, the two preceding calendar years would be 1986 and 1987.

Documentation: For examples of documentation that the Department of Education considers sufficient to support independent student status under points 5, 6, and 7, refer to the "Dear Colleague" letter GEN-87-6, of February 1987.

Although not required by law you may also want to collect documentation supporting independent student status under points 1 through 4 (such as tax returns, DD-214s, letters regarding legal guardianship, and birth certificates), if that documentation is readily available.

For further information on dependency override procedures, see Appendix C.

8/20/88

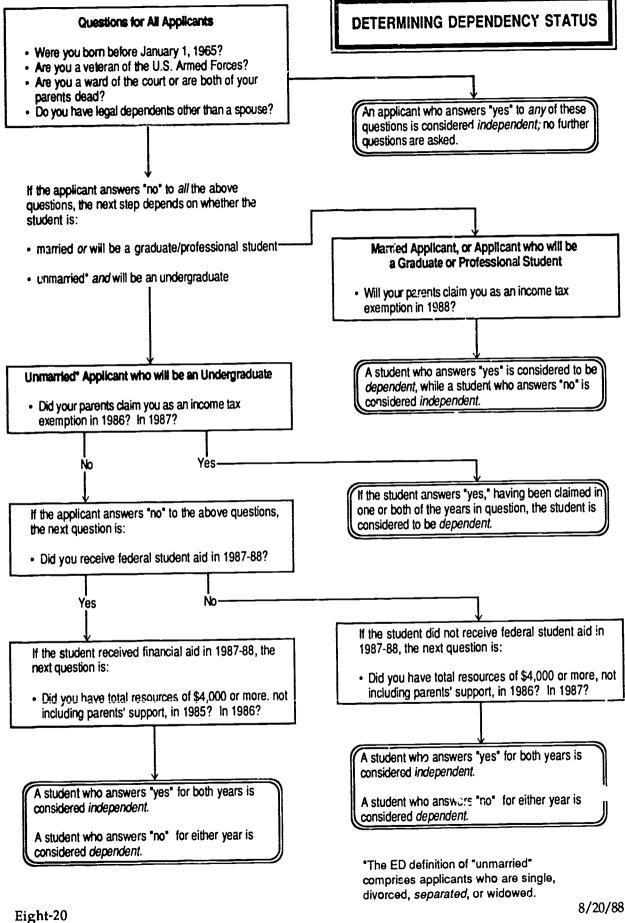

personal decision to provide for their own support once they are in college. Still others who reside with parents and pay room and board to them feel this alone supports their claim to independence. It is important to remember that none of these situations qualifies a student to apply for federal financial aid as an independent student. You should also be aware that some continuing applicants who qualified as independent students under the previous definition may be dependent students under the new definition unless unusual circumstances can be documented that would continue to qualify them as independent.

This will always be an important counseling area in financial aid offices. Students must be counseled that independence is not defined by age, social custom, or personal decision. Independent status is clearly defined by law for the federal student aid programs and is subject to verification by the financial aid administrator.

Because of its fundamental importance, the determination of dependency status is Step 1 on the AFSA and MDE need analysis forms. On the 1988-89 AFSA, dependency status is determined through the series of questions shown on the next page. These questions define whether a student is dependent or independent for purposes of Title IV aid. They also determine the source of income and asset information on the application and the method of computation. As you will see in the next section, the Pell and CM formulas differ from each other in some ways in their treatment of the income and assets of members of the student's household.

# 8.6 THE FORMULAS AND THEIR COMPONENTS

Now that we have examined the issue of dependency status, we are ready to study the need analysis formulas. Having determined the student's independent or dependent status, we know whose information to measure in the need analysis process. We will see that the Congressional Methodology and Pell Grant formulas have similarities as well as differences in treatment.

The details of the Congressional Methodology formula have been published by the Department of Education in *The Congressional Methodology*, 1988-89, a reference publication with worksheets and case studies. MDE processors such as CSS and ACT publish similar discussions of need analysis theory and computation procedures.

A discussion of the Pell Grant formula (or Family Contribution Schedule) has also been published by ED in *The Pell Grant Formula*, 1989-89. This publication also contains Pell formula worksheets and case studies.

# 8.6.1 The Congressional Methodology and Pell Grant Formulas

Shared Elements and Common Concepts

The Congressional Methodology and Pell Grant need analysis formulas share many of the same basic elements. The differences lie in the income information used in calculating the expected family contribution for certain types of students and in the treatment of some of the elements. Both formulas use different computational approaches for the dependent student and the independent, or self-supporting, student.

In each need analysis system, the end product of the formula is an expected family contribution (EFC):

- in the case of the Pell Grant program, the expected family contribution is known as the Student Aid Index (SAI)
- for the CM, the expected family contribution is referred to as the family contribution (FC).

The SAI is always based on a 9-month enrollment figure for both dependent and independent students. In the CM,

For detailed discussions of the need analysis formulas, refer to:

- The Pell Grant Formula, 1988-89
- The Congressional Methodology, 1988-89
- Handbock for Financial Aid Administrators 1988-89 Academic Year (ACT)
- CSS Manual for Student Aid Administrators: 1988-89 Policies and Procedures

the aid administrator may not use the 9-month FC for enrollment periods of more or less than 9 months, but must recalculate the FC to reflect the number of months in the enrollment period. (Appendix D shows how to recalculate an FC for enrollment periods other than 9 months.)

The SAI is used solely to determine Pell Grant eligibility, while the FC is used for the campus-based, Stafford Loan and SLS programs. You may not use the SAI to determine eligibility for the campus-based and Stafford/SLS programs.

Categories of Need Analysis Formulas

The chart on the next page shows the categories of need analysis formulas set forth in the law for the rell Grant and Congressional Methodology family contribution calculations. This may look like a very complex system—for example, there are six\* different regular formulas—but the formulas themselves have much in common. Once the aid administrator has identified the appropriate category of formula for a given student (or an alternative category for which the student also qualifies), the corresponding worksheet from need analysis reference publications can be used to calculate a correct SAI or FC, should the aid administrator wish to do this.

## 8.6.2 How Does a Need Analysis "Formula" Work?

The Pell and CM need analysis formulas measure the two main components of a family's financial strength: *income* and *assets*. The greater the family's income and assets, the more the family can be expected to contribute to meet the student's cost of attendance at an institution.

The Pell and CM formulas recognize that every family has basic subsistence expenses for food, shelter, and other family needs. The formulas provide offsets, based on the number of family members, to take into account these necessary expenses, and may allow for family size in other ways. The formulas also provide offsets for other items such as income tax paid and medical and dental expenses. The offsets are deducted from the total income to find the family's discretionary or available income.

The same principle applies to assets. Assets are a significant part of a family's financial strength. The formulas begin with the family's net assets, and then provide asset reserves or a protection allowance to protect a portion of the family's net assets from assessment. The

Important: Institutions may no longer use the SAI to determine eligibility for the campus-based, Stafford Loan, and SLS programs.

- \*There are three regular Pell formulas, one for each main category of student:
- dependent
- independent, married or single
- independent, with dependents other than a spouse

Similarly, thore are three regular CM formulas.

**♦** Simplified

amount of net assets that remain after the reserves have been taken into account are considered the family's available assets or discretionary net worth.

The family contribution can now be calculated, based on the family's available income and available assets. This, in simplified form, is the way that the Pell and CM need analysis formulas operate.

ED annually publishes in the Federal Register updated tables showing figures to be used in calculating the family contribution under the Pell Grant and CM formulas.

Income, Assets, and Allowances or Offsets

By *income* we mean total taxable and untaxed income. This includes:

- adjusted gross income (taxable income) reported on a tax return
- untaxed income reported on a tax return (dividend exclusion, untaxed portion of unemployment compensation, married couple deduction, etc.)
- earned (taxable) income that was not reported on a tax return (a family may not have filed a tax return yet, or may not be required to because of a low earned income)
- untaxed income and benefits such as welfare benefits (AFDC or ADC), Social Security benefits, Railroad Retirement benefits, and disability benefits

By assets we mean the total of:

- ♦ cash on hand
- checking and savings accounts
- stocks, bonds, trusts, and other securities
- real estate holdings including a home, if owned, or other real estate
- business equipment and inventory of goods and materials in stock

In general, the rechods of needs analysic provide for allowances (offsets) against total samily income for:

- non-discretionary annual expenses a family may have such as:
  - federal taxes
  - state and local taxes\*
  - Social Security tax (F.I.C.A.)\*
  - unusual medical expenses
  - expenses related to the employment of both parents or a single parent
  - other experses such as elementary and high school tuition expenses

Similar allowances or offsets are provided against a family's assets. They reduce the amount of assets used in calculating the family's contribution from assets. These allowances or offsets take account of:

Earned income is taxable income not reported on a federal tax return. It can include:

- · wages, salaries, and tips
- interest income
- dividends
- alimony
- · estate or trust income
- · business or farm profits
- · rental or property income

\*These are allowances only in the Congressional Methodology.

Eight-24

- ♦ debts owed on the asset
- asset protection for:
  - retirement
  - · emergency expenses
  - other discretionary expenses

Appendix A contains examples of Pell Grant and Congressional Methodology analyses for a dependent and an independent student. At this point in our discussion we do not expect that you will have a total grasp of the details of the formulas. However, the following examples should help you to better understand the major components and the basic computational steps in the two formulas. Some of the differences between the dependent and independent analyses and the Pell Grant and CM formulas may also be evident.

#### Elements:

Parental income:

Parents' Contribution (PC) from Income

Parental Assets:

Parents' Contribution

(PC) from Assets

Student (and Spouse) Income:

Student's Contribution

(SC) from Income

Student (and Spouse) Assets:

Student's Contribution (SC) from Assets

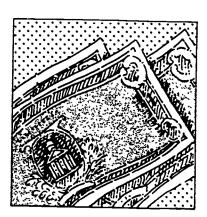

Other factors recognized by the formula:

Household size Number enrolled in postsecondary education during the same academic year

#### Calculation:

PC from Income

- + PC from Assets
- + SC from Income
- + SC from Assets
- FC for the Congressional Methodology formula or
   SAI for the Pell Grant formula

Example of Differences between the Pell and CM Formulas:
Treatment of Veterans
Educational Benefits

 Veturans contributory educational benefits are not included in any part of the Pell need analysis; they are included in the CM formula.

Example 1: Dependent Student, Regular Formula:

- Under the Pell formula, half of the student's expected veterans educational benefits are included in the Parental Income section.
- In the CM need analysis, veterans are automatically considered independent. The dependent student analysis therefore does not include veterans educational benefits.

# Example 2: Overview of Pell/CM Analysis for a Married Independent Student with Children-Regular Formula

#### Elements:

Student (and Spouse) Income:

Student's Contribution (SC)

from income

Student (and Spouse) Assets:

Student's Contribution (SC)

from Assets

#### Other factors recognized by the formula:

Household size

Number enrolled in postsecondary education during the same

academic year

#### Calculation:

SC from taxable and untaxed Income

+ SC from Assets

= FC for the Congressional Methodology formula
ur
SAI for the Pell Grant formula

The Dislocated Worker Formula Variation

Dislocated worker refers to those who have been:

- fired or laid off from work;
- self-employed but are now unemployed because of:
  - poor economic conditions in the community (such as with farmers); or
  - a natural disaster.

The dislocated worker may be the student, the student's spouse, or the parent. To qualify for the Dislocated Worker version of the regular need analysis formula, dislocated workers must have been classified as such by the appropriate state agency. The formula uses estimated year income to determine financial need and excludes home assets.

# Treatment of Veterans Educational Benefits

Example 2: Independent Student, Married with Children, Regular Formula:

- Under the Pell formula, half of the student's expected veterans educational benefits are included in the Student/Spouse Income section.
- Under the CM formula, only a portion
  of the student's expected veterans
  educational benefits are included in
  the calculation of the FC. Therefore,
  the remaining portion of the veterans
  benefits must be counted as a
  resource for the campus-based
  programs or estimated financial
  assistance for the Stafford Loan
  program in determining the student's
  financial need (see Appendix E).

# The Displaced Homemaker Formula Variation

The term displaced homemaker refers to a person who:

- has not worked in the labor force for a substantial number of years (5 years or more) but has, during those years, worked in the home providing unpaid services for family members;
- has been dependent on public assistance or income from another family member, but is no longer receiving that income, or is receiving public assistance because of dependent children in the home; and
- ♦ is unemployed or underemployed and is experiencing difficulty in obtaining or upgrading employment.

The Displaced Homemaker version of the Pell Grant and Congressional Methodology formulas excludes home assets in calculating the student's eligibility for financial assistance. Both formulas provide instructions on the standard worksheets\* for this calculation.

## The Simplified Needs Test

The Simplified Needs Test allows certain applicants to fill out only part of the standard financial aid application form. Based on this limited set of data items, a simplified need analysis is performed—a variation of the regular Pell Grant and Congressional Methodology formulas. The Simplified Needs Test can be used by an applicant whose family has a total adjusted gross income of \$15,000 or less and who:

- either filed an IRS 1040A or 1040EZ
- or did not and will not file a tax return

The only data elements used in the simplified need analysis are the following:

- adjusted gross income;
- untaxed income and benefits;
- federal taxes paid;
- allowance for state and local taxes paid;
- number of family members; and

- Unemployed means not working this week but being available for work and having made specific efforts to get a job sometime during the last 4 weeks.
- Underemployed means working parttime, even though full-time employment is desired, because work is slack or because only part-time work is available.
- \*The standard worksheets are published in *The Pell Grant Formula, 1988-89,* and *The Congressional Methodology,* 1988-89. For examples of their use, see Appendix A.

IRS Forms 1040A and 1040EZ for the 1560 tax year will include items for reporting taxable scholarship and fellowship grant income. This will allow many students, beginning in the 1989-90 award year, to use Simplified Needs Test procedures. Prior to 1988, scholarship and grant income could be reported only on Form 1040, so students having such income did not qualify for the simplified need analysis even when they met the income criteria.

DIC.

 number of family members in postsecondary education.

Assets are excluded from the simplified need analysis. Also, allowances for medical/dental expenses and elementary/secondary school education costs are not deducted from income. Additionally, veterans benefits are excluded from the student's total income. Therefore, the benefits must be counted as a resource for the campusbased programs and as estimated financial assistance for the Stafford Loan program when the aid administrator is determining the financial need of the student.

A student completing the AFSA who qualifies for the Simplified Needs Test need complete only the first five steps of the application. However, if student applicants wish to be considered for state or institutional aid, they should also complete the Supplemental Information section on the form.

Even though students qualify for the simplified formula, it may be to their advantage to use the full data element formula. This may be the case if a family has un sual medical or dental expenses, or elementary/secondary school tuition costs. If a student who qualifies for the Simplified Needs Test fills out the Supplemental Information page on the AFSA or supplies complete information on an MDE application, the processor will calculate primary and secondary EFCs:

- ♦ Primary EFC: The primary SAI and FC always appear in the usual locations on Parts 1 and 2 of the SAR, with the SAI in the upper right-hand corner and the FC in the lower right-hand corner. If the applicant qualified for the Simplified Needs Test, the primary EFC will be from the simplified formula.
- ♦ Secondary EFC: The secondary SAI and FC, if any, will appear in the heading of the "School Use" box on Part 2 of the SAR. A secondary EFC is calculated with the full formula if the applicant qualified for the Simplified Needs Test but also provided enough information for the full data element formula.

In awarding aid, the aid administrator may use:

- either the primary or the secondary SAI; and
- either the primary or the secondary FC.

If an applicant provides only the simplified data elements, but the processor determines that the applicant does not qualify for the Simplified Needs Test, the application will be rejected.

In some cases, a student's expected family contribution may be lower if the full data element formula is used.

By this point in our review of application forms and the major elements of the formulas, you are probably asking, "Do I need to memorize all of this?" The answer to that question is "no"—with a little qualification.

It is essential that you be totally familiar with the various application forms, especially the ones used at your institution. You must be able to counsel and assist students in accurately completing their application forms.

You will also spend many hours reviewing processed need analysis reports, either received by your office from service agencies (such as FAFNARs from CSS and CFARs from ACT) or submitted to your office by students (SARs). You must be able to understand the components and workings of the formulas well enough to relate these documents to the applications that produced them.

The formulas—their components, similarities, and differences—are a more complex issue. You should certainly know the major elements of the formulas and the principles underlying need analysis. It may also be helpful to understand the major areas where the Congressional Methodology and Pell Grant formulas differ. There will always be those students who are ineligible for a Pell Grant but eligible for campus-based aid or a Stafford Loan and who want to know why. In many cases, your explanation will center around the different treatment of various elements in the two formulas.

# 8.7 RECALCULATION AND ADJUSTMENT OF THE EFC BY THE FINANCIAL AID ADMINISTRATOR

The collection and consistent treatment of family income and asset information generally results in a realistic figure for the expected family contribution towards educational costs. However, a student's family may sometimes experience an extraordinary change in circumstances which will affect the family's ability to contribute to educational costs. This may call for an adjustment. Also, there are cases when the aid administrator's review of a processed need analysis report reveals an error in the completion of the original application resulting in an inaccurate EFC. This requires a recalculation.

Adjustments are not the same as recalculations.

- A recalculation is a computation reflecting only mandatory correction of erroneous information on the application.
- An adjustment may be performed when the data used are accurate but the aid administrator determines that the data, methodology, or end result should be adjusted to reflect the student's special circumstances.

ERIC

Full Text Provided by ERIC

In the next two sections, we will discuss *recalculations* and *adjustments* in general terms. We will then highlight differences in your authority to make recalculations and adjustments in the Pell Grant and Congressional Methodology systems.

#### 8.7.1 Recalculations

This term applies to cases in which the aid administrator's review of a processed need analysis report reveals an error in the completion of the original application, resulting in an inaccurate EFC. Inaccurate data generally require a recalculation. The term recalculation only applies to computations of expected family contributions reflecting corrected data.

## 8.7.2 Adjustments

The Higher Education Amendments of 1986, as amended, have given aid administrators the authority to exercise professional judgment to make adjustments which may increase or decrease a student's EFC or COA (cost of attendance). The adjustment must be all eachly related to the special circumstances of the student and might include one of the following conditions:

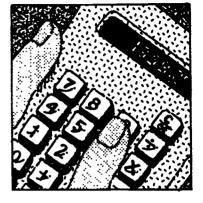

- ♦ a serious illness in the family
- ♦ a loss of employment
- death of a main wage earner
- divorce or separation that significantly changes a family's economic standing

#### These adjustments:

- ♦ are to be done on an individual, case-by-case basis
- must be thoroughly documented in writing (in some cases, adjustments may also have to be reported to the central processor)

The circumstances to be recognized must be documentable. For example, loss of employment, death of a parent or spouse, or a catastrophic illness in the family are justifiable circumstances which can be documented.

See Module 10 for reporting procedures which may need to be followed after an adjustment is made to the SAI.

Once you have determined that an adjustment to a need analysis formula is necessary, a decision must be made as to which data items require adjusting. In the case of changed family circumstances, the adjustment may involve areas such as:

- use of estimated income and estimated taxes paid rather than base-year income
- changes in household size
- reduced assets due to a family emergency such as a catastrophic illness

Documentation supporting your adjustment must be placed in the student's file for future reference. For example, it may be needed in an audit or program review. Two final points to remember:

- all adjustments must be based on accurate information
- → if an adjustment is made in one methodology (for example, in the Pell Grant formula), a comparable adjustment must be made in the other methodology (in this case, the Congressional Methodology) unless a justifiable reason for not doing so is documented

# 8.7.3 Recalculations and Adjustments in Pell Grant and Congressional Methodology Need Analysis

The procedures followed by the aid administrator in making adjustments and recalculating the EFC depends upon the need analysis system involved. The following provides an overview of the treatment of special circumstances and/or erroneous data under the current need analysis systems—the Pell Grant formula and the Congressional Methodology.

# Recalculations and Adjustments in Pell Grant Need Analysis

The aid administrator may recalculate the Pell Grant Student Aid Index (SAI) that results from the Pell Grant need analysis formula, and make an initial Pell Grant payment to a student, if a review of the student's Pell Grant Student Aid Report (SAR) shows erroneous or inconsistent data that must be changed. The Pell Grant

8/20/88

ERIC Full Text Provided by ERIC

system provides the following methods for correcting erroneous data or reporting changed family circumstances:

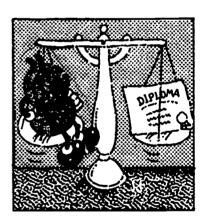

- **♦ Recalculations:** Pell applicants are instructed to review the information contained on their processed Student Aid Reports (SARs) for errors. In some cases the central processor directs a student's attention to specific questionable data items. If corrections are necessary, the student is instructed to correct the data on the SAR and return it to the central processor for recalculation. In the same manner, the aid administrator's review of the SAR may also reveal erroneous data. If the aid administrator determines that corrections must be made, he or she will direct the student\* to return the SAR to the central processor for reprocessing, even if the student's SAI is recalculated by the aid administrator and an initial Pell Grant payment is made. A corrected, reprocessed SAR must be submitted to the aid office while the student is still enrolled as an eligible student for two purposes:
  - for the student to receive any further Pell Grant payments; and
  - ♦ to substantiate any initial payment made to the student as a result of the aid administrator's recalculation of the SAI.
- ◆ Adjustments: When making an adjustment to an eligible SAI on the basis of professional judgment, the aid administrator must either:
  - make the adjustment on Part 2 of the SAR and send it back to the ED central processor for recalculation of the SAI; or
  - ♦ make the adjustment, recompute the SAI, report the change on Part 3 of the SAR (Item #10), and document the student's file with the reason for the adjustment (see Module 10 for further details).

Recalculations and Adjustments in Congressional Methodology Need Analysis

In the CM, the aid administrator has greater flexibility to adjust data and recalculate a family's EFC used in awarding federal campus-based and institutional needbased funds and in certifying a Stafford and/or SLS loan.

◆ Recalculations: When erroneous data items are identified, recalculations of the FC must be done according to

\*See Module 10 for those instances where the student and aid administrator make corrections to data items on the SAR and return the SAR to the central processor.

the Congressional Methodology formula. The Department of Education and some need analysis service agencies publish workbooks annually which provide step-by-step details of the formula and case studies to assist you with recalculation. Another option, if your institution uses one of the need analysis processors, is to request that the student submit revised data to the processor to obtain a recalculated EFC. However, this involves additional processing time and may delay your award packaging for the student.

♦ Adjustments: The regulations for the Title IV campusbased programs (SEOG, CWS, and Perkins Loan) describe the aid administrator's authority to exercise professional judgment in making adjustments. Once you have determined that an adjustment must be made, the next step is to determine what kind of adjustment is required: in data items, in the methodology, in the end product (the FC), etc. As always, documentation of the reason for the adjustment must be placed in the student's file.

# SUMMARY

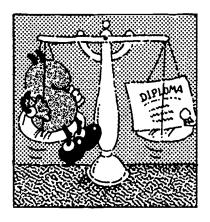

This concludes our discussion of need analysis, one of the most complex and difficult areas for newcomers to student financial aid. Our discussion is intended to introduce you to the topic and to give you a basic understanding of the underlying concepts, the history, the application forms, and the formulas. This is by no means a comprehensive discussion, and we strongly encourage you to study the publications from the Department of Education, ACT, and CSS for more detailed discussions and case studies.

We end the discussion as we began it—by emphasizing the importance of the position of need analysis, the determination of the EFC. The expected family contribution is a central component in our overall need equation:

COA - EFC = NEED

In examining the need analysis methods that have evolved since the 1950s, it is important to realize that they developed at different times to serve somewhat different purposes. That is why today we deal with two different formulas—the Pell Grant and Congressional Methodology formulas. The different purposes they serve result in differences in their treatments of income, assets, and other components of the formulas. Efforts to improve processing procedures for need analysis documents and to refire the formulas have given us MDE processors and the Congressional Methodology.

Regardless of the formula used, the major goal of the existing need analysis methods is to measure systematically and equitably each family's ability to contribute to educational costs. The formulas have been developed to determine and rank need and to distribute limited federal funds to large numbers of needy students. This will take on even greater importance when you begin to distribute those limited funds, as described in Module 9, Award Packaging.

#### **POST-TEST**

- 1. Complete this subtraction problem: Cost of Attendance Expected Family Contribution = ?
  - a. net cost of attendance
  - b financial need
  - c cost of education
  - d. available income
- 2. The term need analysis: (circle the correct answer)
  - a. refers to a mathematical formula used to determine an expected family contribution (EFC)
  - b refers to an overall determination of need for financial assistance
  - c refers to one of the methods specified by law for determining student need for Title IV assistance
  - d. may refer to any of the above
- 3. Multiple data entry refers to: (circle all that apply)
  - a. data collection for both the Pell Grant processor and a certified need analysis processor on a single financial aid form
  - b submission of data for two student applicants (members of the same family) on the same application form
  - c multiple submissions of an application form resulting from the need to correct data
- 4. Need analysis for awarding Title IV funds is based on the principle that:
  - a. parents and students bear the primary responsibility for paying for the cost of attendance at an institution
  - b. the institution bears the primary responsibility for paying for the cost of attendance of any student admitted to its program
  - c the federal government bears the primary responsibility for paying for the cost of attendance of an eligible student admitted to an institution of higher education
- 5. Dependency status refers to: (circle the correct answer)
  - a. the student's relationship to a parent—residence with a parent, tax exemption status, and receipt of financial assistance from the parent
  - b the student's dependence upon financial assistance to attend a given institution
  - c whether the student has dependents of his or her own
- 6. The term base year refers to: (circle the correct answer)
  - a. the calendar year which is 2 years before the student's enrollment (1986 for the 1988-89 academic year)
  - b the calendar year preceding the academic year (1987 for the 1988-89 academic year)
  - c the current academic year, or current period of attendance if this will be less than a complete academic year

ERIC\*

Eight-36 8/20/88

- 7. The Pell Grant SAI and the Congressional Methodology FC are both expected family contribution figures. True or False?
- 8. Circumstances not considered in the Pell Grant and Congressional Methodology need analysis formulas are: (circle any that apply)
  - a. medical expenses of the family
  - b deductions on an income tax return
  - c consumer debts of the family
  - d an institutional scholarship already awarded to the student
  - e. home equity
- 9. If a student is eligible for a Pell Grant: (circle all that apply)
  - a. the student will always be eligible for campus-based aid
  - b the student will always be eligible for a Stafford Loan
  - c eligibility for other aid is unknown until further need has been determined
  - d. the student will always be eligible for a Stafford Loan; beyond that, we cannot say what the student will be eligible for until further need is determined
- 10. Dependency status will determine whose financial information (parents' and student's or student's) and which formula (dependent or independent model) will be used by the central processor to determine an expected family contribution. True or False?
- 11. For independent students, the Pell Grant formula generally uses base-year income data, while the Congressional Methodology uses income data projected for the academic year. True or False?
- 12. Aid administrators may use either the Pell Grant SAI or the Congressional Methodology FC when determining a student's eligibility for a Stafford Loan, because the two formulas are interchangeable for this purpose. True or False?
- 13. Students with family adjusted gross incomes of more than \$25,000 in the base year preceding the award year are ineligible to borrow under the Stafford Loan program. True or False?

#### **ANSWERS**

- 1. b. financial need. (For more information, see Section 8.1.)
- 2. d. The term *need analysis* may be used within the field to mean a, b, or c. Be attentive to the context in which it is used to be sure you understand the meaning being discussed. (8.1, 8.4)
- a. Data collection on one form to be used by two separate processors. Data may be submitted on one application and sent to an MDE (multiple data entry) processing agency. This processor will then forward the data to the ED central processor and, in some cases, to state grant agencies. This means the student does not need to fill out separate application forms for the Pell Grant and other need-based federal and state aid programs. Please note that b is incorrect—each person must fill out a separate application for aid. (8.4)
- 4. a. In awarding Title IV funds, parents and students bear the primary responsibility for paying for the cost of attending an institution, before the federal government provides assistance. Institutions vary in their approach to providing institutional support, often depending upon the extent of the financial resources of the institution. (8.?)
- 5. a. Dependency status refers to the student's relationship to the parent. (8.5)
- 6. b. Base year refers to the calendar year prior to the award year. For example, for the 1988-89 award year, which runs from July 1, 1988 to June 30, 1989, applications may be submitted to processors from January 1, 1988 until the deadline of May 1, 1989 (the application period). The base year is 1987. (8.2)
- 7. True. The Pell Grant Student Aid Index (SAI) and the Congressional Methodology Family Contribution (FC) are both expected family contribution figures. There are similarities and differences in the ways that the Pell Grant SAI and the Congressional Methodology FC are calculated. (8.6.1, 8.6.2)
- 8. c. and d. Consumer debts of the family do not not affect family or student contribution as assessed by these formulas. An institutional scholarship will not affect a family or student contribution. It will be considered a resource when financial aid is packaged, or as estimated financial assistance in determining "need" for a subsidized Stafford Loan. (8.6.1 and 8.6.2)
- 9. c. Need will still have to be determined for other forms of aid. Eligibility for one form of aid never guarantees eligibility for another. Students may have their financial need met through a Pell Grant award, and be ineligible for other aid. Or, students may be ineligible for the Pell Grant, but be eligible for campus-based and/or Stafford and/or SLS funds. (8.3.7, 8.4)
- 10. True. Dependency status will determine whether parental information will be considered. The ED central processor or other processor will use separate formulas for dependent and independent students. (8.5)

ERIC Full Text Provided by ERIC

Eight-38

**う**ょ 8/20/88

- 11. False. Both the Peli Grant and Congressional Methodologies use base-year income for both dependent and independent students. Expected year income is used for the SAI and FC computation only if there is an extraordinary change in the family's circumstances such as the death of a family member or the loss of a job. (8.3.7)
- 12. False. The Pell Grant SAI is used as the expected family contribution for Pell Grant awarding only. For campus-based and Stafford/SLS program awarding, the Congressional Methodology FC is the expected family contribution. (8.6.1)
- 13. False. Although all applicants must show financial need to borrow under the Stafford Loan program, there is no income cap on eligibility. Need for a Stafford Loan is determined based on this formula:

## COA - Estimated Financial Assistance - EFC = Need

Estimated financial assistance includes any Pell Grant for which the student is eligible. The EFC will be the FC calculated using the Congressional Methodology formula for need analysis. This FC can also be used to award campus-based assistance. (8.3.7, 8.6.1)

Questions: 13	Your Score:	Percentage:

#### **GLOSSARY**

adjusted gaoss income (AGI)

An income figure taken from the federal income tax form that has been filed in compliance with IRS regulations and guidelines.

allowances

Financial modifications included in need analysis formulas to provide for a family's non-discretionary expenses or to shelter assets or income for retirement or emergency purposes. In establishing students' costs of attendance, allowances are reasonable amounts allotted by the institution to reflect most students' financial circumstances.

Application for Federal Student Aid (AFSA)

A free financial aid application, provided by the Department of Education, which gathers data to determine both Pell Grant eligibility and expected family contribution using the Congressional Methodology.

assets

Financial holdings such as cash on hand in checking and savings accounts, trusts, stocks, bonds, other securities, home (if owned), other real estate, business equipment, and business inventory.

base year

The 12-month period ending on the December 31st preceding the award year. For example, calendar year 1987 is the base year for the 1988-89 award year.

business assets

Property that is used in the operation of a trade or business including real estate, inventories, buildings, machinery and other equipment, patents, franchise rights, and copyrights. Considered in determining a family's expected contribution.

certified need analysis system

A system which has been certified by ED as capable of accurately calculating EFCs. The May 1988 Federal Register contains a list of need analysis systems certified for the 1988-89 award year. If you use one of these systems to calculate an EFC for the campus-based and Stafford programs, you can be sure that the EFC has been calculated in accordance with the statute.

dependent student

A student who does not satisfy any of the criteria for an independent student must be classified as an dependent student for the purposes of federal Title IV financial aid.

educational benefits

Funds, primarily federal, awarded to certain students—veterans, children of deceased veterans or other deceased wage earners, and students with physical handicaps—to help finance their postsecondary education without regard to financial need.

employment expense offset

An allowance in the determination of the expected family contribution or Pell eligibility. The allowance can be used to meet additional expenses relating to employment when both parents are

ERIC Full Text Provided by ERIC

Eight-40 5.5 8/20/88

employed or when one parent qualifies as a surviving spouse or as head of a household under Section 2 of the Internal Revenue Code.

estimated student financial assistance

For a Stafford, SLS, or PLUS loan, the estimated amount of assistance for the period the loan is sought that a school is aware a student will be or has been awarded in federal, state, or privately supported scholarship, grant, work or loan programs, including veterans educational and Social Security benefits.

expected family contribution (EFC)

The figure which indicates how much of a family's financial resources should be available to help pay the expenses of postsecondary education. This figure is determined according to statutory formulas. The Pell Grant program calls the EFC the Student Aid Index (SAI). The Congressional Methodology calls the EFC the Family Contribution (FC) for the campus-based and Stafford Loan programs.

Family Financial Statement (FFS)

The input document (financial aid application) in the American College Testing Program's system of need analysis.

family size offset

An allowance in Pell Grant need analysis to meet the basic subsistence expenses of a family, including food, shelter, clothing, and other basic needs. This allowance is based on the number of persons in the household.

financial aid application

The input form completed by an applicant and family for one of the need analysis systems. This type of document is the foundation for all need analysis comput-.ions.

Financial Aid Form (FAF)

The input document (financial aid application) in the College Scholarship Service's system of need analysis.

independent student

To be classified as an independent student for federal Title IV financial aid, a student must be an individual who (a) is at least 24 years old by December 31 of the award year for which aid is sought; or (b) is an orphan or ward of the court; or (c) is a veteran of the Armed Forces of the United States; or (d) has legal dependents other than a spouse (for example, dependent children or an elderly dependent parent); or (e) is a graduate or professional student who will not be claimed as an income tax exemption by his or her parents or guardian for the first calendar year of the award year (for example, calendar year 1988 for award year 1988-89); or (f) is married and will not be claimed as an income tax exemption by his or her parents or guardian for the first calendar year of the award year; or (g) is a single undergraduate student with no dependents who was not claimed as a dependent by his or her parents or guardian for the two calendar years preceding the award year, and who demonstrates total self-sufficiency for those two years as evide: red by annual total resources, (taxed and untaxed), of at least \$4,000 in each of those years (for example, calendar years 1986 and 1987 for award year 1988-89). A student may also be

determined to be an independent student on the basis of unusual circumstances documented by the aid administrator.

Multiple Data Entry (MDE)

The mechanism which allows for the incorporation and transmission of Title IV data elements through various approved need analysis data collection documents so that applicants can apply for both the Pell Grant and other financial assistance by completing one form. The MDE processor transmits the data to the federal processing center, and students receive their eligibility notifications for a Pell Grant from the Pell central processor.

need analysis

A process used to determine a student applicant's need for financial assistance to help meet his/her educational Cost of Attendance.

need analysis report

The output document resulting from one of the financial aid application forms used to calculate the Congressional Methodology family contribution (FC) or the Pell Grant Student Aid Index (SAI). The most common need analysis reports are the federal Student Aid Report (SAR), the College Scholarship Service's FAFNAR, and the American College Testing Program's CFAR.

need analysis servicer (NAS)

A servicer that produces EFCs for student applicants. See certified need analysis system.

offsets

See allowances.

parents' contribution

A quantitative estimate, according to the approved need analysis methodologies, of the parents' ability to contribute to postsecondary educational expenses.

resources

For purposes of determining awards and overpayments in the campus-based programs, resources include, but are not limited to, (a) any funds the student is entitled to receive from a Pell Grant regardless of whether the student applies for it; (b) waiver of tuition and fees; (c) scholarship or grant, including an SEOG or athletic scholarship; (d) fellowship or assistantship; (e) insurance programs for the student's education; (f) SLS, PLUS, statesponsored, or private loan proceeds not used as a substitute for the EFC; (g) long-term loans, including Perkins Loans but excluding Stafford Loans, SLS, and PLUS, made by the institution; (h) net earnings from need-based employment ("net earnings" means gross earnings minus taxes and job related costs); and (i) veterans and Social Security benefits (except that part included in the calculation of the student's EFC).

self-help expectation

The principle that a student has an obligation to help pay for a portion of his or her education. A standard self-help expectation is frequently computed in the analysis of student resources.

standard maintenance allowance

An allowance against income for the basic costs of maintaining family members in the home. The allowance is based upon

Eight-42 8/20/88

ERIC

Full Text Provided by ERIC

consumption and other cost estimates of the Bureau of Labor Statistics for a family at the low standard of living.

Student Aid Index (SAI)

The numeric value reported on the Student Aid Report (SAR) that indicates the expected family contribution for the Pell Grant program obtained by performing the Family Contribution Schedule Methodology of need analysis.

student contribution

The amount the student is expected to contribute toward educational costs from base year income (taxed and untaxed), assets, and other resources. This is based on an analysis of income (taxes and untaxed) and assets with allowances provided for both to ensure that the student can meet necessary expenses.

taxable income

Income earned from wages, salaries, tips, as well as interest income, dividends, alimony, estate or trust income, business or farm profits, and rental or property income. These types of income are usually reported on an IRS tax form.

Uniform Methodology (U.M.)

A method for determining a student and/or family's ability to pay for postsecondary education, used by the major need analysis services and many institutions and state agencies. This methodology may not be used to award Title IV funds after June 30, 1988.

unmet need

The difference between the sum of a student's total available resources and expected family contribution (EFC) and the total cost for the student's attendance at a specific institution.

untaxed income

Income received that is not taxed. Examples of such income are Social Security benefits, welfare benefits, interest on tax-free bonds, some unemployment compensation, military and other subsistence and quarters allowances.

- 47 Introduction to the Need Analysis Case Studies
- 48 Case 1: Jessica Swanlake
  Pell Need Analysis
  CM Need Analysis
- 58 Case 2: Oedipa Maas Pell Need Analysis CM Need Analysis
- 64 Case 3: Gary Michaels
  Pell Need Analysis
  CM Need Analysis
- 69 Tables for Fell Formulas
- 72 Tables for Congressional Methodology Formulas

## INTRODUCTION TO THE NEED ANALYSIS CASE STUDIES

## Before Working with these Case Studies

This appendix contains three case studies. Each case study provides sufficient information to calculate the SAI and FC. Wherever specific information is not provided, you should assume that the answer is negative. For example, if nothing is said about whether the student owns a house, assume that the student does not own a house.

All necessary tables for the Pell Grant and CM fomulas are provided at the end of this appendix.

When working with the Pell formula, remember these important points:

- ♦ Always check to see if the family is eligible for the employment expense offset.
- ♦ Always use the *net values* of assets—the value of the asset minus any debts against that asset.
- ♦ Always use the standard rule for rounding to the nearest dollar--round down for 49 cents or less, and round up for 50 cents or more.

For Further Study of Need Analysis After Completing this Appendix

The case studies in this appendix are based on three of the case studies in *The Pell Grant Formula*, 1988-89. For further Pell case studies and more detailed information, refer to that publication. For further information on CM need analysis, see *The Congressional Methodology*, 1988-89. For CM case studies, see the CSS Manual for Student Aid Administrators: 1988-89 Policies and Procedures or ACT's Handbook for Financial Aid Administrators 1988-89 Academic Year.

## **CASE 1: JESSICA SWANLAKE**

Jessica Swanlake, who is 22 years old and recently divorced, lives in Wisconsin with her mother, who is also divorced. Jessica's younger brother is also a member of the household. Jessica's mother had an adjusted gross income of \$12,500 in 1987, all of it earned from work. She also received \$2,500 in child support and paid \$1,432 in federal income tax. The family paid \$600 in tuition and \$200 for meals for the brother to attend a private elementary school. The family's house is worth \$60,000, and there is a \$20,000 mortgage against it. The family has a total of \$500 in checking and savings accounts.

Jessica had \$5,000 adjusted gross income in 1987 from her job as a factory office assistant, and paid \$62 in federal income tax. Jessica claimed one exemption (for herself) on the 1987 tax form, and took the standard deduction rather than itemizing. (Her mother claimed her as an income tax exemption on her 1986 income tax return.)

Jessica was laid off when the factory closed. On the date Jessica filed her student aid application, she had \$300 in savings. Jessica will be enrolled in a 2-year program at a community college. Because she will be taking a full course load, she only expects to earn \$2,000 in 1988, most of it working in the cafeteria over the summer.

Eight-48

# PENDENT STUDENT

Includes modifications for -dislocated worker -displaced homemaker

PARENTAL INCOME	
1. 1987 TAXED INCOME (From IRS Form 1040-line 30, 1040A-line 12, 1040EZ-line 3. For non-tax filer, add 1A and 1B.)	12,500
1A. INCOME EARNED FROM WORK BY FATHER	YIIIIIIIIIII
1B. INCOME EARNED FROM WORK BY MOTHER	12,500
2. 1987 UNTAXED INCOME AND BENEFITS (Social Security Benefits, AFDC, Child Support, Other.)	2,500
3. ONE-HALF OF STUDENT'S EXPECTED VETERANS EDUCATIONAL BENEFITS	0
4. TOTAL INCOME (Lines 1 + 2 + 3)	15,000
5. 1987 U.S. INCOME TAX PAID*	1,432
6. STATE TAX ALLOWANCE (See Table 1)	1,800
7. FAMILY SIZE OFFSET (See Table 2)	8,100
8. MEDICAL/DENTAL OFFSET (Enter amount that exceeds 20% of: Total income minus U.S. and State taxes.)	0
9. EMPLOYMENT EXPENSE OFFSET (Enter 50% of the lesser income from line 1A or 1B, not to exceed 1500.)	1,500
10. TUITION OFFSET (Enter the lesser of reported tuition paid or 3450 times children for whom turtion is paid)	600
11. TOTAL OFFSETS (Add lines 5, 6, 7, 8, 9, 10)	13,432
12. PARENTS' DISCRETIONARY INCOME (Line 4 minus line 11. If negative, enter as a negative number.)	1,568
ASSESSMENT RATE (See Table 3)	.11
13. PARENTS' CONTRIBUTION FROM INCOME (If negative, enter 0.)	172
	uumuumiil

\* Substitute 1988 expected taxed and untaxed income if father or mother is a dislocated

worker, and use Table 4 for U.S. taxes paid.

As a single undergraduate student who was claimed by a parent as an income tax exemption, Jessica is considered dependent on her mother. Therefore, we use the Dependent Student Worksheet for both the Pell and CM analysis.

Because Jessica and her mother had a combined taxed income of \$17,500, Jessica cannot use the simplified formulas. Therefore, we use the Regular Worksheet, not the Simplified Worksheet, for both the Pell and CM analysis.

6. From Table 1, the state tax allowance for Wisconsin for incomes of \$15,000 or more is 12%.

10. Only the tuition paid for Jessica's brother at the elementary school, not including the cost of his meals, can be counted in the tuition offset.

	ASSESSMENT RATE	X .75
	INCOME	0

23, 24, and 25. Jessica is considered a dislocated worker because she lost her job. Therefore, her 1987 income and U.S. taxes paid are ignored. Instead, the \$2,000 she expects to earn In 1988 is used instead. Based on the expected income of \$2,000, Jessica's estimated taxes for 1988 would be 0, because the standard deduction plus the exemption exceed her expected income.

<sup>\*</sup> Substitute 1988 expected taxed and untaxed income if student or spouse is a dislocated worker, and use Table 4 for U.S. taxes paid.

# CASE 1: PELL NEED ANALYSIS (CONTINUED)

n.	Revised Parents' Contribution for the Student for MORE than 9-Month Enrollment'	=	

Substitute the Revised Parents' Contribution for the Student for LESS or MORE than9-Month Enrollment in place of the Standard Parents' Contribution for the Student on Regular Worksheet A, pages 2 and 4.

#### **CASE 2: OEDIPA MAAS**

Oedipa Maas earned \$3,000 in 1987 and was not required to file an income tax return. Oedipa was an Army nurse for several years, and will receive veterans educational benefits of \$376 per month for nine months to attend a technical school. She has a total of \$750 in her checking and savings accounts and a \$1,000 certificate of deposit. She is currently a resident of New Mexico.

Eight-58

# EPENDENT STUDEN

You may use the simplified calculation if the total taxed or earned income for the student and spouse is less than \$15,000, and the student and spouse did not file a 1987 tax return, or filed a 1040A or 1040EZ.

STUDENT/SPOUSE INC	COME
1. 1987 INCOME (From IRS Form 1040-line 30 1040A-line 12, 1040EZ-line 3 For non-tax filer, ನವರೆ (A and 1B)	3,000
1A. AMOUNT EARNED FROM WORK BY STUDENT	3,000
1B. AMOUNT EARNED FROM WORK BY SPOUSE	
UNTAXED INCOME AND BENEFITS (Social Security Benefits, AFDC, Child Support, Other.)	0
3. ONE-HALF OF STUDENT'S EXPECTED VETFRANS EDUCATIONAL BENEFITS	
4. TOTAL INCOME (Lines 1 + 2 + 3)	3,000
5. 1987 U.S. INCOMETAX PAID	0
6. STATE TAX ALLOWANCE (See Table 1)	150
7. FAMILY SIZE OFFSET (See Table 2)	5,300
8. MEDICAL/DENTAL OFFSET (Enter amount that exceeds 20% of Total income minus U.S. and State taxes \( \)	(de marco). N
<ol> <li>EMPLOYMENT EXPENSE OFFSET (Enter 50% of the lesser income from tine *A or 1B, not to exceed 1500, if student is marned or has dependents)</li> </ol>	٥
10. TUITION OFFSET (Enter the lesser of reported tuition paid or 3450 times children for whom tuition is paid.)	the state of the s
11. TOTAL OFFSETS (Add lines 5, 6, 7, 8 9, 10)	5,450
12. STUDENT'S DISCRETIONARY INCOME (Line 4 minus line 11 If negative, enter as a negative number)  ASSESSMENT RATE (If no dependents other than spouse, multiply by 75 Others see Table 3)	-2,450
13. STUDENT'S CONTRIBUTION FROM INCOME (If negative, enter 0)	0

Oedipa is automatically considered independent because she is a veteran of the U.S. Armed Forces. Therefore, we use the Independent Student Worksheet for both the Pell and CM analysis.

Because Oedipa is a non-tax filer with a total taxed income of less than \$15,000, she can use the simplified formulas. Therefore, we use the Simplified Worksheet, not the Regular Worksheet, for both the Pell and CM analysis.

- 5 Because she is a non-tax filer, her U.S. income tax paid is 0.
- 9. Oedipa does not get an employment expense offset because she is single with no dependents.

### CASE 2: PELL NEED ANALYSIS (CONTINUED)

STUD	ENT/SPOUSE AS	SETS
14. NET V	ALUE OF HCME

	RIBUTION FROM INCOME AND TS (Lines 13 + 20.)	0
	DIVIDE BY THE NUMBER OF FAIL - MEMBERS IN COLLEGE	
	ENT AID INDEX	0

In this Simplified Worksheet, the student's assets are not considered.

Oedipa is single with no dependents. For this reason, her entire net assets would be considered available assets and would be multiplied by 33% if we were using the Regular Worksheet.

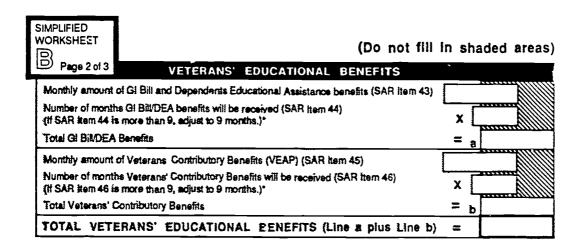

1988-89 FAMILY CONTRIBUTION FORMULA - SIMPLIFIED

<sup>\*</sup> To adjust veterane' educational benefits for other than 9-month enrollment, multiply monthly amount of benefits
[SAR items 43/45] by the lesser of the number of months enrolled or number of months reported (SAR items 44/46)

### (Do not fill in shaded line)

FAMILY CONTRIBUTION		
STUDENT CONTRIBUTION FROM INCOME (from previous page)		1,200
INCOME SUPPLEMENT (from previous page)	+	
FAMILY CONTRIBUTION	=	1,200

<sup>\* \*</sup> Net worth of home is considered to be zero if student is a dislocated worker or a displaced homemaker.

#### **CASE 3: GARY MICHAELS**

Gary and his wife Lindsay have two children and are residents of North Carolina. Gary earned \$3,000 as a part-time mechanic in 1987, and Lindsay earned \$11,000 as a respiratory therapist. Their adjusted gross income (IRS 1040 - line 30) was \$14,700 and they paid \$1,384 in federal income tax. Gary and Lindsay are renters, and have a total of \$1,200 in checking and savings accounts, two \$500 savings bonds, and another \$1,000 in a mutual fund.

Their younger child had a serious operation in 1987. The total bills amounted to \$8,000, and the Michaels were able to pay \$3,200 in 1987. (They did not have health insurance.)

Gary is now in the second year of an undergraduate program. He is 30 years old.

Eight-64

# DEPENDENT STUDENT

Includes modifications for -dislocated worker -displaced homemaker

=		
S	TUDENT/SPOUSE IN	COME
1.	1040-line 30, 1040A-line 12, 1040EZ-line 3. For non-tax filer, add 1A and 1B.)	14,700
	1A. INCOME EARNED FROM WORK BY STUDENT	3,000
	1B. INCOME EARNED FROM WORK BY SPOUSE	11,000
2.	1987 UNTAXED INCOME AND BENEFITS (Social Security Benefits, AFDC, Child Support, Other.)	0
3.	ONE-HALF OF STUDENT'S EXPECTED VETERANS EDUCATIONAL BENEFITS	0
4.	TOTAL INCOME (Lines 1 + 2 + 3)	14,700
5.	1987 U.S. INCOME TAX PAID 🛠	1,384
6.	STATE TAX ALLOWANCE (See Table 1)	1,323
7.	FAMILY SIZE OFFSET (See Table 2)	10,400
8.	MEDICAL/DENTAL OFFSET (Enter amount that exceeds 20% of Total income minus U.S. and State taxes)	2,401
9.	EMPLOYMENT EXPENSE OFFSET (Enter 50% of the lesser income from line 1A or 1B, not to exceed 1500, if student is married or has dependents)	1,500
10.	TUITION OFFSET (Enter the lesser of reported tuition paid or 3450 times children for whom tuition is paid.)	
11.	TOTAL OFFSETS (Add lines 5, 6, 7, 8, 9, 10)	17,008
12.	STUDENT'S DISCRETIONARY INCOME (Line 4 minus line 11 lf negative, enter as a negative number)  ASSESSMENT RATE	-2,308
	(If no dependents other than spouse, multiply by .75. Others see Table 3.)	
	STUDENT'S CONTRIBUTION FROM INCOME (If negative, enter 0)	0

Substitute 1988 expected taxed and untaxed income if student or spouse is a dislocated worker, and use Table 4 for U.S. taxes paid.

Gary is automatically independent because of his dependent children. Therefore, we use the Independent Student Worksheet for both the Pell and CM analysis.

Even though the Michaels had a combined taxed income of under \$15,000, Gary cannot use the simplified formulas because he and Lindsay filed the full 1040 tax return. Therefore, we use the Regular Worksheet, not the Simplified Worksheet, for both the Pell and CM analysis.

8. Calculating the Medical/Dental Offset

Outstanding Medical/Dental Bills = \$8,000 - \$3,200 = \$4,800

Total Income minus U.S. and State Taxes

- \$14,700 (item 4)
  - 1,384 (item 5)
  - \_1.323 (item 6)
- 11,993

20% of \$11,993  $\Rightarrow$  \$2,399

So the Medical/Dental Offset = \$4,800 - \$2,399 = \$2,401

12. The Michaels have a negative discretionary income. This could be used to offset any contribution from assets. However, the formula produces a zero contribution from assets (see item 20 on the next page), so no additional offset is needed.

#### TABLES FOR CM FORMULA C: INDEPENDENT STUDENT WITH DEPENDENTS (CONTINUED)

#### ESTIMATED 1988 TAXES

To estimate 1988 taxes for a parent or student, find the net taxable income by subtracting the standard deduction and exemptions from the total expected 1988 taxable income,\* as described below. Then use the appropriate tax schedule (X, Y, or Z) to calculate the tax on that amount.

- TOTAL EXPECTED 1988 TAXABLE INCOME\*
- STANDARD DEDUCTION (single = 2540; married = 3760)
- **EXEMPTIONS X 1900**
- **NET TAXABLE INCOME** (If 0, report 0 for taxes paid)

### PARENTS

> STUDENTS

If married, use Schedule Y. If single, use Schedule Z

If married, use Schedule Y. If single and exemptions = 1 or 0, use Schedule X. if single and more than one exemption, use Schedule Z

#### APPENDIX B

### SAMPLE NEED ANALYSIS OUTPUT DOCUMENTS: SAR, FAFNAR, AND FFS CONFIRMATION REPORT/CFAR

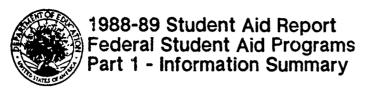

This appendix shows the following sample output documents from the central processor and two of the MDE processors:

- the SAR from the ED central processor
- ♦ the FAFNAR from the College Scholarship Service
- ♦ the FFS Confirmation Report and CFAR from the American College Testing Program

For illustrative purposes, the same sample data from the same imaginary student, Thomas Washington, were submitted to all three processors.

#### INSTRUCTIONS

This report is in response to the form you submitted to FSAP on which you applied for Federal Student Aid.

This Student Aid Report (SAR) has three parts. Part 1 is the Information Summary. Part 2 is the Information Review Form. Part 3 is the Payment Form that your school will use when calculating your award. Submit all 3 parts to the Financial Aid Office at your school immediately.

#### **ELIGIBILITY**

If the information on the back of this page is correct and you meet all other eligibility requirements, you may receive a Pell Grant in 1988-89. If you receive a Pell Grant, the amount of your award will depend on the cost of attendance at your school for a full academic year on a full time basis and on other factors.

If the information on the back of this page is not correct, use Part 2 of your SAR (Information Review Form) to change it. Follow the instructions on Part 2.

NOTE: You must complete Statements of Updated Information, Educational Purpose, Certification Statement on Refunds and Default, and Registration Status before you can receive any Federal financial aid.

#### **VERIFICATION REQUIREMENTS**

Your application has been selected for review in a process called verification. You must submit signed copies of your (and your spouse's) financial documents to your school. A verification worksheet is enclosed to assist you.

#### SPECIAL COMMENTS TO THE APPLICANT

To receive a Pell Grant, you must enroll in an eligible school. Check with the school you plan to attend in 1988-89 to find out if it is eligible for the Pell Grant Program.

#### APPENDIX C

#### **DEPENDENCY OVERRIDE**

- ♦ Circumstances in Which the Aid Administrator Must Change the Student's Status from Independent to Dependent: A student who meets the definition of an independent student (see pages 17 and 18) as:
  - ♦ a graduate or professional student;
  - ♦ a married student; or
  - ♦ a single undergraduate with at least \$4,000 in resources for each of the two relevant calendar years;

may not be treated as an independent student in 1988-89 if he or she was:

- ♦ treated as an independent student in the 1987-88 award year; and
- claimed as a dependent for income tax purposes for 1987 by any other individual (other than a spouse).

The aid administrator must override the independent status of such students.

♦ Circumstances in Which the Aid Administrator May Change the Student's Status from Dependent to Independent: An aid administrator may overrice a dependent student's status on the basis of professional judgment (see page 18).

Dependency Override Procedures for the AFSA and ED Central i ocessor

The AFSA Correction Application can be used:

- as the original aid application--the "first transaction" (the Correction Application may only be used as an original application when a dependency override is needed); or
- to change the dependency status of a student who has already submitted an aid application. The SAR may not be used to change dependency status.

You should direct the student to fill out Step 1 of the AFSA (the dependency questions) with the correct information. Then, tell the student to disregard the instructions and fill out:

- the red areas (changing from independent to dependent); or
- the gray areas (changing from dependent to independent).

You should then complete the *override code* (Step 6 of the AFSA) with:

- your institution's 6-digit Pell Institution Number\*
- the middle two digits of the student's Social Security Number
- ♦ the correct code letter:
  - "I" for independent to dependent
  - "D" for dependent to independent

"If your school has no Pell ID number, fill in only the last 3 slots of the override code--the students' middle two Social Security Number digits and the code letter. Attach a note to the application explaining that your institution has no Pell ID number.

The AFSA may now be mailed to the central processor. When the student's SAR is received, there will be several indicators of the dependency status override:

- ♦ a comment on Part 1
- ♦ the override code at the bottom of the first page of Parts 1 and 2
- ♦ the name of the overriding institution in "College Name" on Parts 1 and 2

If the dependency everride is not the original application, a student may have both dependent and independent SARs. You should be sure to use the new, valid SAR with its payment document. With transfer students whose status was changed to independent through a prior professional judgment override, the aid administrator at the new institution must decide whether to treat the student as dependent or independent.

### Dependency Override Procedures for MDE Processors

CSS (Financial Aid Form) and ACT (Family Financial Statement) are processing dependency status overrides on the original application, provided that it is accompanied by a request form or letter signed by an authorized school official. The SARs received from these applications will already reflect the student's override status.

ISSC and PHEAA are not processing dependency status overrides on the original application. After receiving the SAR, use the AFSA Correction Application to override.

After the first transaction, overrides submitted to any MDE processor will not be transmitted to the central processor. To override the dependency status used in calculating the SAI on the SAR, such overrides should always include the submission of an AFSA Correction Application to the central processor.

### Example of a Dependency Override

Billy B. Nett is a 23-year-old graduate student who qualified under the independent student definition for the 1987-88 academic award year (under point 5 on page 18). However, he became ill during the school year, dropped out of school, and resigned from his job. When Billy applied for aid for the 1988-89 academic year, he signed the certification statement that his parents would not claim him on their 1988 income tax forms.

Joan Briggs, the financial aid administrator, is familiar with Billy's case. She receives his 1988-89 SAR, flagged for verification. She requests Billy's 1987 IRS 1040A but receives a Statement of Non-Filing. At this point, she requests Billy's parents' 1987 tax forms and discovers that his mother claimed Billy as an income tax exemption because she had provided more than 50% support during 1987 for expenses related to his illness.

Ms. Briggs informs Billy that he must correct his dependency status (from independent to dependent) because he was claimed as an exemption on his mother's tax form (someone other than a spouse). Ms. Briggs, Billy, and his mother now complete their respective sections of the AFSA Correction Application and send it off to the central processor for a dependency override and a new, valid SAR.

8/20/88 114 Eight-97

#### APPENDIX D

# RECALCULATING THE FC FOR PERIODS OF ENROLLMENT OTHER THAN 9 MONTHS

The following recalculations are covered in this appendix:

- ♦ dependent student's parental contribution
- ♦ independent student's maintenance allowance
- ♦ independent student's veterans benefits

### Dependent Student's Parental Contribution

For a dependent student, the parental contribution *must be recalculated* for periods of enrollment other than 9 months. The worksheets for recalculating the parental contribution are shown on page 57 in Appendix A. The recalculated parental contribution is then used in place of the standard 9-month figure for recalculating the FC. (The dependent student's own contribution from income and assets is *not* recalculated.)

An independent (with dependents) student's family contribution may be recalculated using the dependent student model.

Independent (Without Dependents) Student's Maintenance Allowance

For periods of enrollment other than 9 months, the maintenance allowance must be modified for independent students without dependents.

Use this formula:

\$600 x Number of Months = of Noneproliment

Modified Maintenance Allowance

The modified maintenance allowance is then used in place of the 9-month figure for recalculating the FC.

## Independent Student's Veterans Benefits

For periods of enrollment other than 9 months, veterans benefits *must* be modified for *all* independent students, but *only* when using the full data element (regular) formula.

Use this formula:

**\$VA** per x month

Lesser of Number of Months Enrolled = or Number of Months Reported

Modified VA Benefits

The modified VA benefits figure is then used in place of the 9-month figure for recalculating the FC. If the student is enrolled for *less* than 9 months *and* has reported VA benefits for the same number of months for which he or she is enrolled, do not recalculate.

### APPENDIX E

# VETERANS EDUCATIONAL BENEFITS: TREATMENT AS A RESOURCE AND ESTIMATED FINANCIAL ASSISTANCE

The regulations for the *campus-based programs* require that veterans educational benefits not already included in a student's Congressional Methodology FC be included as a *resource*, to be subtracted from the cost of attendance, when determining the student's eligibility for campus-based aid.

Veterans educational benefits that are not already included in a student's FC must also be considered as estimated financial assistance when determining a student's eligibility for a Stafford Loan.

- ♦ Dependent Students: A dependent student's FC does not include any veterans educational benefits. Veterans are automatically considered to be independent for the purposes of Title IV aid. Therefore, dependent students will have no veterans educational benefits to be counted as a resource or as estimated financial assistance.
- ♦ Independent Students Using the Simplified Formulas: The simplified formulas do not take veterans educational benefits into account. Therefore, 100% of these benefits will be counted as a resource or estimated financial assistance for independent students using the simplified formulas.
- ♦ Unmarried Independent Students Without Dependents: The regular full-data FC formula for these students includes 100% of any veterans educational benefits. Therefore, none of these benefits will be counted as a resource or estimated financial assistance for unmarried independent students without dependents.
- ♦ Independent Students With Dependents (Including a Spouse): The regular full-data FC formula for independent students with a spouse and/or other dependents includes only a portion of the student's veterans educational benefits. Therefore, the amount of these benefits to be counted as a resource or estimated financial assistance will need to be determined as follows:

VA Educational Benefits to be Counted as a Resource or Estimated Financial Assistance = Total VA Edu-  $\times$  Cational Benefits = No. in College
